SERVICE TO GOVERNMENTAL AGENCIES

SEED - Studio for Energy and Environmental Design

As co-coordinator for SEED, I have worked with students and faculty to provide environmentally progressive design services to Tennessee state agencies. These range from visionary designs exploring the possibilities of future projects to full fledged design/build efforts. With each collaboration teams and goals are reformed to address the particular challenges presented. Yet, the projects are united by certain visions and beliefs – that to design and build in the most environmentally progressive manner possible is both a responsibility and a potential source of poetry; that public buildings, with their stewardship of public funds, natural resources, and cultural resources provide a powerful statement about the culture to which we aspire; and that when architectural ideals confront pragmatic concerns students are presented with intense learning opportunities.
